

Simulation Study of Hydrogen Injection into Graphite

A. Takayama, S. Saito, A. M. Ito, S. Yonemura, and H. Nakamura

Summary

We have been developing a molecular dynamics (MD) simulation code, a binary collision approximation (BCA) based simulation code, and a BCA-MD hybrid simulation code. In this paper, an overview of the codes is presented. BCA-based simulation results of hydrogen isotopes injection into graphite target are also shown. Detailed description is given as a full abstract.
