OPENING REMARKS

Mendoza, Argentina, December 2003.

Dear colleagues:

This meeting has been organized in order to celebrate two important events. On one hand, we have the tenth anniversary of the Journal BIOCELL. On the other hand, the foundation of the Sociedad Argentina de Microscopía (SAMIC). These events will be held in the context of the twenty first annual scientific meeting of the Sociedad de Biología de Cuyo, a regional forum of academic exchanges.

BIOCELL was originally published under the name "Revista de Microscopía Electrónica", the official organ of the Sociedad Latinoamericana de Microscopía Electrónica (SLAME). A new design for the journal, then entitled "Microscopía Electrónica y Biología Celular" appeared after a Congress held in Mendoza in 1978. This scientific journal was published, from 1982 to 1992, as the official organ of the scientific societies "Latinoamericana de Microscopía Electrónica" (SLAME) and "Iberoamericana de Biología Celular" (SIABC). In 1993 the journal changed its name to "BIOCELL" and began to be issued from Mendoza, Argentina. Currently BIOCELL has new digital and electronic versions. It has been incorporated to the ScIELO/Argentina project, which will be internationally available on line in the near future.

Up to the present, the journal has published 236 original articles, 10 reviews, 16 brief notes and 16 minireviews, mainly about structural and functional biology, development, molecular and cellular biology, histo- and immunocytochemistry, and vegetal and genetic cytology. Additionally, BIOCELL has published the scientific proceedings of a number of regional and national societies. Thus far a total of 4,223 abstracts from symposia, conferences and communications have been published.

BIOCELL has demonstrated continuity, maintaining high quality standards both in form and contents, with a strict reviewing policy. Its printed version has reached international diffusion and fostered scientific exchange. The prestige attained by this journal has been recognized by international indexing services as an outstanding example of high scientific publication quality in Latin America.

With regard to the second event, we are celebrating the foundation of the Argentine Society of Microscopy, it should be remembered that light, electron, and confocal microscopy, are powerful tools to answer questions and to solve problems both in biology (human, animal and plant) and in materials science. Many researchers have developed their scientific work around, or closely linked to, the use of different microscopic techniques. This body of scientists, remarkable for its diversity and number, has been invited to gather at the "Sociedad Argentina de Microscopía". In this meeting, the statutes of the society will be discussed and hopefully approved, and its first committee will be appointed.

Mendoza gave birth to the current Cuyo Biology Society in 1973 and to BIOCELL in 1993. Today, in December 2003, Mendoza will become the foundational seat of the new society. Thus SAMIC will contribute other societies of microscopy already in operation in the region to the development of this field in Latin America. In this way the network of colleagues and friends will be strengthened on a continental and international basis.

As a final wish, we hope that your stay in our city and your participation in this event will be unforgettable.

The organizing committee.
